inet-logistics at the 24th German Logistics Congress: consistent refinement of the standard software for supply chain execution

- **logistics-server[®] well suited for distribution by qualified partners**
- **LogicaCMG is a new sales partner**
- **Numerous new customers work with the logistics-server[®]**

For the third time in a row inet-logistics GmbH, the leading provider of standard software solutions for the supply chain execution, presents the latest improvements and further developments concerning its logistics-server[®] at the German Logistics Congress in Berlin. At the Hotel InterContinental, room Bellevue, stand B/16, the software house provides information about the continuous refinements which are made to the standard software for supply chain execution. Today, there are also more and more qualified partners which offer inet-logistics' software. Thus, only recently the software house announced its partnership with the international IT- and consulting enterprise LogicaCMG. "The extensive rollout of our standard software by means of qualified partners is only a logical consequence of our well-structured market development strategy which we have been pursuing sustainably. Two years ago when we presented ourselves at the BVL-congress for the first time, we were able to display the results of our five year work which we had put into the development of our basic product range. Last year we were able to present in an impressive manner numerous well-known customers who are looked after by us and also show the innovation potential which the solution possesses with regard to the intelligent linking of RFID-technology with the logistics-server[®]. This year we demonstrate in addition to further signifi-

cant customer applications also our competency to provide qualified partners with a professional software solution for the preparation, control and execution of cross-company transport processes," says Oswald Werle, CEO inet-logistics, when summarising the company's engagement at this year's BVL-congress.

At the exhibition stand the company portrays solutions which are based on the logistics-server® and which support the integrated transport management, the freight cost management as well as the loading device management. Well-known companies such as ThyssenKrupp Services, Magna Steyr Fahrzeugtechnik, Siemens, SAS Autosystemtechnik, Robert Bosch, Novartis, Hilti, OMV, Henkel, Geberit, OC Oerlikon Balzers, Egger, Migros, Schweizerische Post, Panalpina, Kühne+Nagel, Gebrüder Weiss, Fiege, Hellmann Worldwide Logistics and DHL have been using these solutions for several years already. In addition, companies such as Kraft Foods International, TridonicAtco and Würth Logistics decided this year to take advantage of the logistics-server® in order to solve their specific SCE-problems.

About inet-logistics

The Austrian software company **inet-logistics GmbH**, headquartered in Wolfurt, and its subsidiary inet-logistics GmbH in Frankfurt unite as the leading provider of solutions for supply chain execution expert know-how from the logistics and IT sector. This knowledge characterises the performance of the logistics-server® standard solution suite for supply chain execution. This incorporates all the tasks relating to the preparation, implementation and monitoring of transport processes throughout a company. A structured, tried-and-tested process for launching the software, which is used in critical business areas, completes the range of services. Customers such as ThyssenKrupp Services, Magna Steyr Fahrzeugtechnik, Siemens, Robert Bosch, SAS Autosystemtechnik, Novartis, Hilti, OMV, Henkel, Kraft Foods International, Geberit, OC Oerlikon, Egger, TridonicAtco, Migros, Würth Logistics, Schweizerische Post, Panalpina, Kühne+Nagel, Gebrüder Weiss, Fiege, Hellmann Worldwide Logistics and DHL providers use inet-logistics' standard software.
